Double-Take® Availability™ for AIX

Easy, Complete, Affordable High Availability For Your Business Systems

Automated high availability provides simple, comprehensive, cost-effective protection for your mission-critical AIX applications and data

Ensuring high availability and minimizing costly downtime for your AIX systems doesn't have to be complicated or time-consuming. Double-Take Availability for AIX makes it easy with reliable, real-time replication of your data and applications and automated failover whenever necessary.

Availability is about more than keeping operations running after disasters or handling planned and unplanned system outages. Corrupted and accidentally deleted data pose additional threats. Vision RightTime™ CDP(Continuous Data Protection), which is built into Double-Take Availability for AIX, allows you to roll your server back to a previous point in time and quickly restore data that is lost or damaged due to system failure, human error, or any other cause.

Key Benefits

- Minimizes downtime
- Protects against data loss
- Simplifies high availability and disaster recovery management
- Lessens workloads, reduces human error, speeds recoveries and enforces best practices through the use of built-in, automated procedures
- Supports mixed hardware, storage and operating system versions to avoid vendor lock-in
- Protects data and application availability in local or remote physical, virtual, or cloud environments
- Delivers high availability and disaster recovery affordably

Easy High Availability with Double-Take Availability for AIX

Minimizes downtime
Speeds recoveries by automating failover processes, monitoring primary system health and, optionally, automatically initiating a failover.

Protects your data
Safeguards all your data by eliminating the gaps in protection inherent in nightly tape backups or periodic snapshots. Real-time replication coupled with continuous data protection technology, protects data and applications up to the point of failure, and also lets you recover corrupted or deleted data or roll your server back to past points in time.

Safeguards all AIX environments
Flexibly supports replication between mixed IBM AIX versions and Power Systems models in virtual, physical, and cloud environments.

Avoids storage vendor lock-In
Allows you to choose the most cost-effective storage-and change your choice when appropriate—by supporting replication between storage from different vendors.

Simplifies high availability and disaster recovery management
Provides easy, graphical high availability management with monitoring of your replication environment from any device with a browser.

Affordably protects data and application availability
Offers the lowest total cost of ownership for a midrange high availability and disaster recovery solution, allowing you to rapidly achieve a return on your investment.
